

Personal Protection Privacy Screens

To improve staff safety ACI has created five types of screens in a variety of styles and sizes. Screens are made of .220 CLR industrial PVC PALRAM. Acrylic or Polycarbonate is available at additional cost and a longer lead time that will be calculated when order is placed (please specify with your order).

- ◆ WS-BIOSHIELD-D3084 includes 8 Brass / Stainless Steel Standoff Desk Grips and Black PVC Edge Guard
- ◆ Stand alone screens include a poplar wood frame for stability

Personal Protection Privacy Screens

Case Study

Organization: Casa Grande Elementary Schools

Challenge: As administrators and parents developed procedures to safely reopen district schools for in-person instruction during the COVID-19 crisis, Lisa Costales, the purchasing manager, got an email from her ACI account manager detailing the new safety products being developed. She went ahead and ordered a supply of the new, washable cloth facemasks and asked for more information about the Personal Protection Privacy Screens. She thought they might be a good way to create separation between students.

Solution: ACI Shop Manager Paul Sabel took samples of a couple of the screens his team had designed to Lisa and other school administrators. Together they tried them in classrooms and made some suggestions on how the screens might be modified to suit better their needs.

After the design changes were implemented, 184 bioshield personal screens in three different sizes (30"x24", 60"x18", 30"x24") were delivered to the school and tried out as limited in-person classes resumed. School administrators agreed that the screens were helping them achieve the safety they desired and placed an order for 660 more of them for delivery as they increased in-person classes in the coming months.

The revised design for the bioshield personal screen became the standard design for this new ACI product.
